

As a non-profit association, communication is critical to serve our membership. Frequently that communication is fax based as our physician members find this the most convenient method. We are concerned that the new FCC regulations would require permission from our membership base prior to faxing if there is any indication that the fax might be commercial in nature. This would provide excessive burden on small associations such as ourselves. We are not abusing a system- but trying to provide timely and efficient services.

Thank you in advance for consideration of our concerns.
